SEE WHAT'S **NEW**

CGM MEDISOFT

Practice Management and EHR

CGM MEDISOFT is a trusted and affordable practice management solution built to simplify the way you run your practice.

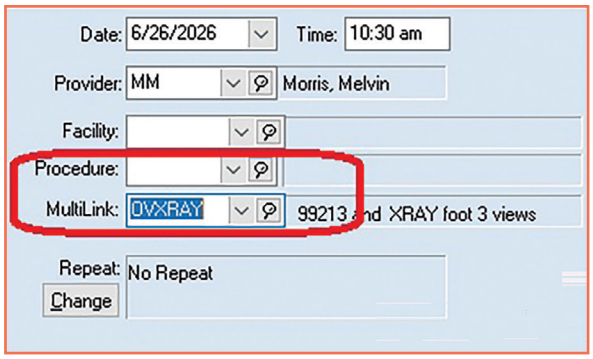
With each release, **CGM MEDISOFT** gets more capable—new layers of functionality and usability, year after year.

See what **CGM MEDISOFT** v31 can do for you.

Unprocessed charges, all at once

Every completed appointment should turn into a charge—but in a busy practice, it's easy for one to slip through. **CGM MEDISOFT** v31 makes it simple to catch them all.

Run the new Create Unprocessed Charges, and the system adds charges for every checked-out appointment at once, using each visit's Procedure and MultiLink codes. Anything it can't process cleanly gets flagged, so nothing gets missed.



Add a procedure or MultiLink code to an appointment and it will become a ready-to-post charge once the patient is checked out

It's revenue capture that takes one step—whether you're setting up your very first charge-entry workflow, or you've been chasing down missed visits for years.

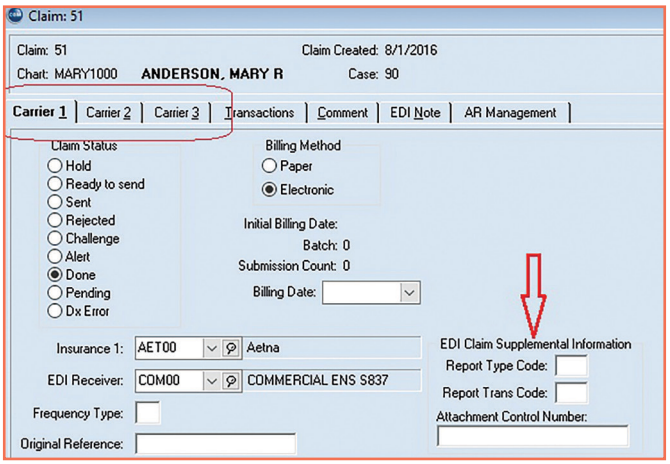
Cleaner, more accurate claims

Claim attachments used to live at the case level, but different payers on the same case often need different information.

CGM MEDISOFT v31 adds attachment info to the claim itself, so each payer gets exactly what it needs. This means fewer rejected claims, and the existing case-level settings still work as a fallback.



With attachment information at the claim level, each payer for a case can receive its own, unique information

Revenue Management, built for speed

Posting remits is repetitive work, but Revenue Management in **CGM MEDISOFT** v31 takes some of that repetition off your plate.

Auto-check of patient responsibility lines

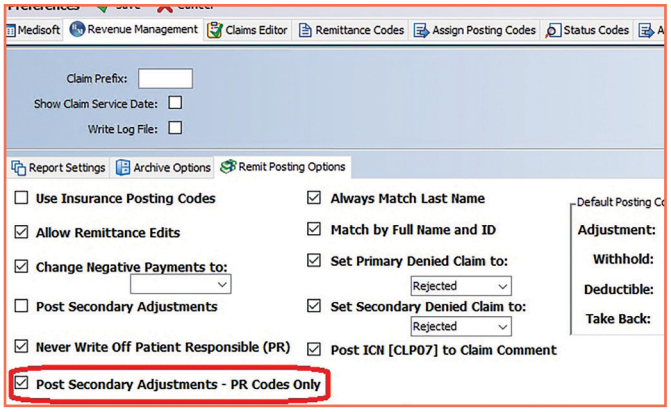
A new preference automatically checks patient responsibility (PR) lines when you're posting a secondary remit. No more clicking through line by line.

AR status codes & AR notes, right in the ERA

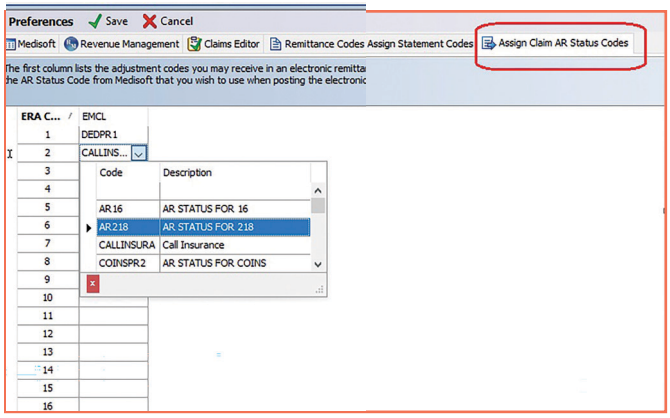
Assign AR status codes and AR notes directly within an ERA. Your updates are saved to the AR Tracker and the claim.

Revenue Management remembers where you left it

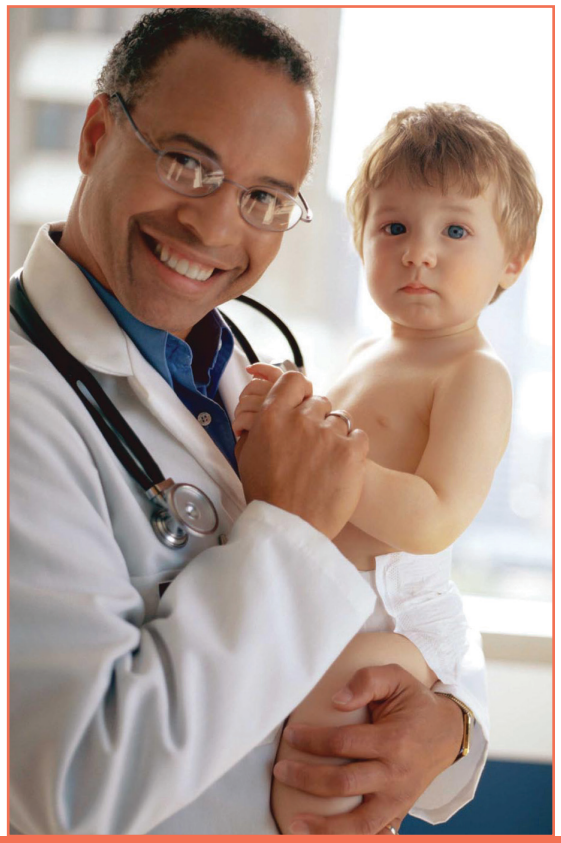
The system remembers your window sizes and positions between logins, even if you are using multiple monitors.



Automatically check PR lines for posting when working a secondary remit



Map ERA codes to AR status codes once, and they are applied automatically going forward



Still running CGM MEDISOFT Basic?

The Basic edition of **CGM MEDISOFT** is being phased out, but upgrading to Advanced is more affordable than ever. Several of this year's biggest enhancements rely on capabilities that Basic doesn't include.

- Full patient accounting and revenue cycle management tools—the old Basic edition only offered limited versions of both
- MultiLink codes—the same capability powering this year's unprocessed charges features
- AR Tracker with AR status codes and tasks

Supporting the patient journey

With options for complementary software and services, **CGM MEDISOFT** connects to a broader ecosystem built around the needs of your practice and, most importantly, your patients.

- Interface to a full EHR with an award-winning solution such as **CGM APRIMA**
- Reduce no-show rates and keep patients engaged between visits with **CGM CONNECTION** for appointment reminders and patient outreach
- Connect through **eMEDIX**—the only approved and fully supported clearinghouse for **CGM MEDISOFT**—for statement delivery, electronic claim attachments, and faster patient payments with **CGM PAY**
