

## Telehealth Solutions for Medisoft Customers

To help patients and providers connect in a way that minimizes risk while maximizing care during the **COVID-19 outbreak**, eMDs Medisoft & Updox are offering Video Chat and Secure Text, a HIPAA-compliant telehealth solution, at reduced cost. The Video Chat and Secure Texting bundle is currently available for \$49 per provider per month.

Video Chat is convenient and easy to use, with minimal training requirements for staff and patients and no special apps or downloads needed. Recommended use cases for Video Chat include:

- Triage incoming patients to determine and evaluate risk to reduce non-emergent office visits
- Provide sick or exposed staff the virtual care option to limit exposure and panic while maintaining productivity of business operations
- Offer remote monitoring to promote continuity of care, minimize liability and mitigate costly hospital readmissions.
- Allow quarantined providers to counsel virtually in order to maintain patient schedule
- Proactively communicate with your patients regarding local and national updates and educational content
- We're committed to ensuring providers have convenient, accessible and easy-to-use tools to care for their patients, maintain revenue within their businesses, and protect themselves and their staff.
- To learn more about Updox telehealth workflows or to get started, contact me today.
